

DNA

Leonardo Rossano & Debora Mansur

true

Inspired by the dynamic forms of biogenetics, the DNA modular bench consists of a single element of curved wood plywood, assembled specularly.

The result is an appealing piece of furniture with a particular helix shape, each step of which corresponds to a seat suitably separated from the others. DNA is also available in a version upholstered in leather or fabric. Thanks to its adaptability and sturdy craftsmanship, DNA is the perfect addition for hospitality settings like lobbies, lounges and guestrooms. DNA is also available in the upholstered collection, in fabric or leather.

Ispirata dalle forme dinamiche della biogenetica, la panca modulare DNA consiste in un singolo elemento in compensato di legno curvato, assemblato specularmente.

Il risultato è un avvolgente elemento d'arredo dalla particolare forma ad elica, ad ogni passo della quale corrisponde una seduta opportunamente separata dalle altre. Grazie alla sua versatilità e alla sua robustezza artigianale, DNA è l'aggiunta perfetta per ambienti di hospitality come lobby, lounge e sale d'attesa.

DNA è disponibile anche nella versione rivestita in pelle o tessuto.
